

## Patient Data Registry Management

### Keep your health record updated with DrCatalyst.

It's time to stop being overwhelmed by patient charts and administrative work. We can help you manage a centralized registry of patient data and make your EHR look exactly as needed.

#### This service can help you:

- ✓ Keep patient health records up to date.
- ✓ Reduce the time spent on phone calls and faxes.
- ✓ Retrieve and transfer patient data faster.
- ✓ Have an organized, accurate, and secure registry.
- ✓ Reduce patient data errors and irregularities.
- ✓ Have a smoother workflow in your clinic.

We standardize your registry, make patient data easy to follow, and engage your patients in their health care.

## 1 Register New Patients

Our remote staff interview new patients, obtain the required information, and accurately enter all necessary data in your EHR.

## 2 Register Referred Patients

When a referral is received—either through fax or phone call—our staff register the patient in your EHR right away.

## 3 Collect Patient Information

Our HIPAA-certified nurses contact the patient to collect information that is needed to update or adjust health records.

## 4 Update Patient Data in your EHR

When an update for patient data is received, our remote staff double-check the information, compare it with the patient chart in your EHR, and then make the required changes.
