

IPA Services

Focus on your business, not on paperwork.

We provide a set of cost-effective services that are designed to automate and streamline the workflow of payer organizations and improve the processing of health benefits and managed care programs.

Claims Adjudication

Our remote staff receive and process claims, evaluate them with regards to the benefit or coverage requirements, and provide the necessary decisions. Our team can also perform claims entry for claims that are not imported automatically.

Benefits Configuration

We verify, manage, and organize the details of your patients' health plan benefits to provide a smooth and accurate claims processing.

Contracting and Credentialing

For your convenience, we take care of the necessary credentialing processes and have your qualifications verified and approved in an expedited manner. We also ensure that your fee schedules are up to date and correctly applied.

Eligibility Configuration

We help ensure that your list of membership eligibility details are accurate and updated. Our remote team integrates the eligibility electronic lists from your members' health plans with QuickCap 7.

EDI Management

Our EDI Management service provides an easier and faster process of fixing failed claims. We aim to resolve claim errors, generate claim numbers, and expedite the posting of your claims backlog so that you can get reimbursed sooner.
